EDUCATION

Indiana University Bloomington

Aug. 2023 – May 2027

Bachelor of Science in Computer Science

GPA: 3.8/4.0

- **Coursework:** Data Structures, Algorithms, Databases, Computer Systems, Machine Learning, Computer Architecture, Distributed Systems

EXPERIENCE

CompuCell3D Lab

Sep 2023 - Jan 2024

Undergraduate Researcher

Bloomington, IN

- Implemented UI enhancements for an existing virtual tissue simulation tool, enabling configurable parameters requested by researchers and improving experiment usability.
- Extended a Python-based XML generation pipeline to support new simulation inputs, ensuring compatibility with predefined schemas used in downstream research workflows.
- Collaborated with researchers and faculty to translate experimental requirements into functional UI and data-processing features within an established codebase

PROJECTS

Trading Strategy Simulator | Python, FastAPI, Pandas

Mar. 2026 – Present

- Built a backend tool to evaluate trading strategies on historical stock data by simulating buy and sell decisions over time.
- Implemented data loading and preprocessing for CSV-based market data, enabling automated strategy testing on historical price series.
- Designed API endpoints to trigger backtests and return structured performance results for further analysis.

Personal Website | HTML/CSS, Python(Flask), Render, Vercel, MongoDB

Jan. 2025 – Present

- Built a personal web platform with a Python-based backend, supporting user-submitted messages and persistent data storage through RESTful APIs.
- Implemented backend endpoints with basic input validation and error handling, improving robustness and preventing malformed or unsafe requests.
- Structured the project to separate backend logic and data access, laying the groundwork for future feature expansion and maintainability.
- Deployed the application to a cloud hosting platform, gaining hands-on experience with environment configuration and production setup.

Raspberry Pi | Python, PyCharm

Sept. 2023 – Feb. 2024

- Led the development of code for the group project, collaborating with team members on design, implementation, and testing.
- Programmed and configured the Raspberry Pi, writing custom code to meet project requirements and ensure successful completion of tasks.

SKILLS

Languages : C/C++, Java, Python, JavaScript, HTML/CSS, SQL (PostgreSQL)

Tools : PyCharm, Visual Studio Code, Git, Flask, API, Double Commander, IntelliJ IDEA,
